

# ABCem

- A Non-Eugenol Resin cement.
- Provides a tough adherence and holds the crown in a hard setting that can be easily removed.
- Its high elasticity compensates for the lost PDL, absorbing some of the occlusal forces. As a result, the abutment screws have a much lower tendency to become loose.
- It is an easy to use auto mixing dispensing unit which

consists of:

1. One 5ml syringe containing ABCem
2. 10 Mixing tips
3. 1 Mixing pad
